ENTERGY is Committed to Raising Community Awareness

Science, technology, engineering and mathematics (STEM) projects are a major focus in schools across our country. Entergy is committed to raising community awareness of the need for math, science, and technology (MST) advancement in area schools in conjunction with SUNY Oswego’s Project SMART through a grant that targets K-12 classrooms. Eight area teachers participated this past year on this project and met recently with Entergy representatives and Project SMART personnel to discuss their work on this initiative. Entergy’s Charitable Foundation has just awarded an 8th year of this funding to SMART for the 2012-2013 academic year.
