(A) Atmospheric Hazard – alternative procedure to eliminate hazard by using ventilation may be used-29CFR1910.146(c)(5)

(R) Reclassification – Removal or elimination of hazards prior to entry may be possible such as use of LO/TO procedure. If a space can be reclassified it can then be treated as a Non-Permit Required Confined Space. Spaces must be reclassified for each entry and return to a PRCS when the entry is completed.

<td>Throughout Campus</td>
<td>N</td>
<td>These are not permit required confined spaces (PRCS) since under normal circumstances there is no serious safety or health hazard present or anticipated in the spaces. A number of these spaces do not even meet the definition of a confined space.</td>
</tr>
</tbody>
</table>
they are entered through a normal door and hence do not have limited access. If an activity which could create a serious is anticipated in one of these spaces, e.g. welding, working on energized equipment using toxic materials, etc., then the classification should be reconsidered and a permit may be necessary for that activity.

Campus policy to ensure the safety of SUNY Oswego Facilities Services staff a 4 gas meter is required when working in crawl spaces.

| HVAC Systems – S-Supply, E-Exhaust R-Return EU - Energy Units HU - Heat Units AHU - Air Handling Units MUA - Make Up Air EF- Exhaust Fan ERU- Energy Recovery Unit Cooling Towers | HVAC | Throughout Campus | Y (areas that have moving Parts) | These Systems have multiple access points – several of which contain no moving parts or equipment. Access points with no moving equipment have been labeled as Authorized Personnel Only (APO).

The areas within the HVAC systems that have moving parts or equipment are considered PRCS and are labeled as such, reclassification may be possible after the equipment has been Locked Out. | N |
